## Understanding Baby Proportions and Anatomy

### Baby Head Proportions

A baby's head is disproportionately large compared to its body. This is a crucial aspect to grasp when drawing. A simple technique is to envision the head as roughly one-fourth the length of the entire body. Practice drawing different head shapes and sizes to get a feel for the variations in head form.

### Body Proportions

Babies have rounded limbs and a soft, yielding build. Focus on curves and rounded shapes rather than sharp angles. Notice how the baby's chest and abdomen are proportionally fuller than an adult's. The legs are often bent, and the arms are frequently close to the body.

## **Hands and Feet**

Baby hands and feet are often chubby and rounded. They aren't quite as refined as those of an adult. Use simple shapes – ovals and circles – to sketch the hands and feet, then add details like fingers and toes.

## **Different Styles of Drawing Babies**

### **Cartoon Babies**

Cartoon baby illustrations are characterized by exaggerated features – large eyes, wide smiles, and oversized heads. This style can be fun and easy for beginners. Example: The babies from children's books or animated movies often employ this style.

### **Realistic Baby Portraits**

Realistic drawings require meticulous attention to detail. Precisely capturing the baby's features, from the shape of the nose to the curve of the lips, is key. This style can be more challenging but extremely rewarding.

### **Stylized Babies**

Stylized baby drawings use simplified shapes and lines to create a unique visual language. Artists often use bold colors and patterns to give the baby a character of their own. Example: Children's book illustrators frequently use this approach.

## **Techniques for Drawing Babies**

### **Sketching**

Start with light pencil sketches to capture basic shapes and proportions. Don't press down too hard. Experiment with different perspectives.

### **Shading and Lighting**

Shading can add depth and dimension to your drawings. Study how light falls on a baby's face and body. Use cross-hatching, blending, or stippling techniques to create shadows.

### **Adding Details**

Once the basic forms are established, add finer details like hair, clothes, and accessories. Focus on creating a sense of softness and vulnerability. For example, consider how the clothes drape on the baby.

Whether you're a seasoned artist looking to refine your skills or a complete beginner eager to tackle a rewarding subject, this tutorial is for you. We'll focus on creating a realistic yet approachable baby drawing, emphasizing common proportions and easy-to-follow techniques. So grab your pencils, paper, and let's get started on this delightful artistic journey!

### **Understanding Baby Proportions: The Foundation of Your Drawing**

Before we even pick up a pencil, it's essential to understand the fundamental differences in a baby's proportions compared to an adult or even an older child. Babies have significantly larger heads relative to their bodies. This is a key characteristic that instantly conveys their youth.

- Head Size:** A baby's head is roughly one-quarter of their total body length. For adults, it's closer to one-seventh or one-eighth. This larger head will dominate your initial sketches.
- Body Shape:** Babies have rounder, softer bodies with less defined muscle structure. Limbs are shorter and chubbier.
- Facial Features:** Eyes are large and set lower on the face. Noses are small and often less prominent. Mouths are small and pouty. Ears are also proportionally smaller and can be positioned lower than on an adult face.
- Extremities:** Hands and feet are plump and rounded, with stubby fingers and toes.

Understanding these basic proportions will prevent your baby drawing from looking like a miniature adult and will instantly make it more believable.

### **Materials You'll Need**

You don't need a lot of fancy equipment to start drawing a baby. Here are some

essentials: \* **Pencils:** A range of graphite pencils (e.g., HB for sketching, 2B or 4B for shading) is ideal. \* **Paper:** Smooth drawing paper or sketchpad. \* **Eraser:** A kneaded eraser is excellent for lifting graphite gently, and a regular rubber eraser for cleaner corrections. \* **Reference Images:** This is crucial! Find clear, high-quality photos of babies to guide you. Look for different poses and expressions.

## **Step-by-Step: How to Draw a Baby's Body**

Let's begin with the foundational shapes. We'll aim for a seated or lying-down baby, as these poses are generally simpler for beginners.

### **1. Sketching the Basic Shapes: Head and Torso**

Start by drawing a large circle for the baby's head. Remember, it's proportionally big! Don't worry about perfection at this stage; these are just guides. Next, lightly sketch an oval or a rounded rectangle for the torso, connecting it to the head. The torso should be significantly smaller than the head, perhaps about three times the diameter of the head in length. Think of it as a soft, rounded shape rather than a sharp-edged box.

### **2. Adding the Limbs: Arms and Legs**

Now, let's add the limbs. For arms, draw two curved lines extending from the torso, ending in simple circles or ovals for the hands. Keep the arms relatively short and often bent or tucked in. For legs, draw two curved lines extending from the bottom of the torso, ending in rounded shapes for the feet. Baby legs are often pudgy and can be bent at the knee. You can draw them bent outwards or tucked in towards the body. Remember to keep all these initial lines light. We're building a framework.

## **Drawing the Baby's Face: Capturing Innocence**

The face is where a baby drawing truly comes alive. Let's break it down.

### **1. Placing the Guidelines for Facial Features**

Lightly draw a vertical line down the center of the head circle and a horizontal line across the middle. These are your basic facial guidelines. You'll also want to add another horizontal line about halfway between the middle line and the bottom of the circle. This will be the placement for the eyes. \* **Eyes:** Draw two large, rounded shapes for the eyes on the lower horizontal guideline. They should be spaced apart so that an imaginary eye could fit between them. Baby eyes are often described as wide and curious. \* **Nose:** The nose is usually very small and sits on the vertical guideline, below the eyes. A simple rounded shape or a tiny triangle can represent it. Often, it's just a slight bump. \* **Mouth:** Draw a small, curved line for the mouth, positioned below the nose. A gentle upward curve can suggest a smile, while a straight line can

convey a neutral expression. Babies often have pouty lips.

## **2. Refining the Head Shape and Features**

Now, begin to refine the head shape. Babies have soft jawlines, so avoid sharp angles. Blend the head and neck smoothly. \* **Eyes:** Add pupils and irises to the eyes. Don't make them too detailed initially; focus on the overall shape and placement. You can add a small highlight to give them sparkle. \* **Ears:** Draw the ears on the sides of the head, roughly aligning their tops with the eyes and their bottoms with the bottom of the nose. Baby ears are usually rounded and may not have as much detailed cartilage as adult ears. \* **Cheeks:** Emphasize the roundness of the baby's cheeks. They are a defining feature of a baby's face.

## **3. Adding Hair (Optional)**

Babies can have very little hair, or a full head of soft, wispy strands. For wispy hair, draw small, curved lines emanating from the scalp. If they have more hair, you can create soft, rounded shapes.

## **Detailing the Baby's Body: Softness and Chubby Folds**

Now that the face is taking shape, let's return to the body and add those characteristic baby details.

### **1. Refining Limbs and Extremities**

\* **Chubby Arms and Legs:** Round out the arms and legs, making them look soft and full. Erase your initial guideline circles. \* **Hands and Feet:** Refine the hands and feet. Draw rounded fingers and toes. Don't draw distinct lines between each finger or toe initially; focus on the overall shape of the hand and foot. Think of them as little mittens and booties. \* **Chubby Folds:** This is where the drawing really starts to look like a baby. Add subtle, curved lines to indicate chubby folds around the wrists, elbows, knees, and neck. These folds are soft and rounded, not sharp creases.

**2. Adding Clothing (Optional)** \* If you're drawing the baby clothed, now is a good time to add that. Simple onesies, sleepsuits, or loose-fitting garments work well. Remember to consider how the fabric would drape over the baby's soft, rounded form.

## **Shading and Texture: Bringing Your Baby Drawing to Life**

**Shading is what adds depth, form, and a sense of realism to your drawing.**

## 1. Establishing Light Source and Shadows

Imagine where your light source is coming from. This will determine where your shadows fall. Babies have very soft transitions from light to shadow. \* **Gentle Shading:** Use your softer pencils (2B or 4B) to add subtle shading. Focus on the areas that would naturally be in shadow, such as under the chin, along the sides of the limbs, and in the creases of the folds. \* **Roundness:** Use curved strokes to follow the form of the baby's body. This will enhance the sense of roundness and softness. \* **Cheeks and Forehead:** These areas are often well-lit, so keep them lighter, perhaps with just a touch of soft shading to define their curves.

## 2. Adding Fine Details and Highlights

\* **Eyes:** Add subtle shading within the eye socket and around the iris. A small white highlight in the pupil will make the eyes look wet and alive. \* **Lips:** Add a touch of shading to the lower lip to give it a bit of volume. \* **Skin Texture:** For very young babies, the skin is incredibly smooth. Avoid adding rough textures. You can use a blending stump or your finger (gently!) to smooth out your graphite for a softer skin effect.

## Common Mistakes to Avoid When Drawing Babies

Even with the best intentions, it's easy to fall into common traps when drawing babies. \* **Making the Head Too Small:** As we discussed, the large head is key to conveying babyhood. \* **Drawing Adult-like Features:** Avoid sharp jawlines, defined muscles, or overly detailed facial features. Keep it soft and rounded. \* **Over-Detailing Small Features:** Tiny noses and mouths don't need a lot of complex lines. \* **Harsh Lines and Shadows:** Babies have soft, rounded forms, so your lines and shading should reflect this. \* **Forgetting the Folds:** Those chubby folds are crucial for that unmistakable baby look.

## Tips for Improving Your Baby Drawings

Practice is the absolute best way to improve. Here are some additional tips to help you on your journey: \* **Study Real Babies:** If you have friends or family with babies, observe them! Note their expressions, their movements, their proportions. \* **Draw from Photos:** Use high-quality reference photos. This will give you accurate information about light, shadow, and form. \* **Sketch Regularly:** The more you draw, the more comfortable you'll become with the subject. Don't be afraid to make mistakes; they are part of the learning process.

**\* \*\*Focus on One Element at a Time:\*\*** If you're struggling with eyes, spend a session just drawing eyes. If hands are tricky, dedicate time to hands. \*

**\*\*Experiment with Different Poses:\*\*** Once you're comfortable with a basic pose, try drawing babies in different positions - crawling, sleeping, playing. \*

**\*\*Don't Be Afraid of Lightness:\*\*** Often, beginners press too hard. Start light and build up your tone gradually. This allows for easier corrections and softer results.

Drawing a baby is more than a simple exercise in sketching—it is an intimate blend of observation, emotion, and artistic connection. Whether you're a parent wanting to preserve a cherished moment or an artist seeking to capture innocence, understanding how to render a baby's features with warmth and authenticity requires thoughtful attention to form, expression, and subtle details. At its core, drawing a baby begins with seeing beyond the sum of features. The face of an infant is soft and rounded, with gentle curves that emphasize vulnerability and joy. The eyes are large and expressive, often conveying curiosity or sleepiness, and they serve as the emotional anchor of the portrait. Rather than focusing solely on precise anatomy, artists should emphasize the gentle tilt of the head, the faint crease of a smile, or the slight softness around the lips—elements that breathe life into the image. The nose is typically small and smooth, often hidden beneath the softness of the cheeks, while the mouth may be gently open or partially closed, suggesting a quiet moment of contentment. Texture and shading play crucial roles in conveying the baby's delicate skin. Rather than smooth, flat surfaces, artists benefit from incorporating subtle gradients and soft shadows that mimic the natural folds, warmth, and subtle translucency of infant skin. The use of light should enhance the sense of softness—diffused glows around the face and gentle transitions between light and shadow help create a lifelike, tender atmosphere. Clothing, too, adds depth; soft fabrics draped loosely over small forms require careful rendering of folds and texture without overwhelming detail, maintaining the focus on the baby's presence. Beyond technical execution, drawing a baby invites a deeper emotional engagement.

This art form bridges visual storytelling and personal memory, allowing artists to connect with themes of innocence, growth, and familial love. For educators and child development professionals, these drawings serve as meaningful tools to support early learning, fostering empathy and recognition of human expression. For artists, the challenge lies in balancing realism with stylization—capturing the essence rather than adhering strictly to anatomical accuracy. The applications of baby drawing extend into diverse creative fields. In illustration, it forms the foundation for children's books, nursery decor, and personalized keepsakes. In fine art, it inspires tender portraits that speak to universal human themes. As digital art and AI tools evolve, artists now have new ways to refine techniques, yet the heart of the practice remains rooted in observation and emotional resonance. Looking ahead, the future of drawing a baby embraces both tradition and innovation. Digital platforms enable artists to experiment with dynamic textures and layered effects, while social media fosters global communities where techniques are shared and celebrated. As cultural appreciation for early childhood development grows, so does demand for authentic, heartfelt representations that honor the fleeting beauty of infancy. Ultimately, drawing a baby is an act of love translated into line and light. It is an invitation to slow down, observe with care, and celebrate the quiet magic of new life through the timeless language of art.

## **Mastering the Art: A Comprehensive Guide to Drawing a Baby**

Drawing a baby, whether for a portrait, an illustration, or just for the joy of artistic expression, presents a unique and rewarding challenge. Unlike drawing adults, a baby's features are softer, their proportions are different, and capturing that elusive sense of innocence and vulnerability requires a keen eye and a patient hand. This detailed, analytical guide will walk you through the process, from understanding fundamental anatomy to adding those crucial finishing touches that bring your baby drawing to life.

### **The Foundation: Understanding Baby Anatomy and Proportions**

Before you even pick up a pencil, it's essential to grasp the core differences between adult and infant anatomy. Babies aren't just miniature adults; their skeletal structure and soft tissues develop significantly in the first year. This understanding forms the bedrock of a convincing baby drawing. We'll explore key proportional differences and the characteristic shapes that define a baby's form.

#### **Head Proportions: A Larger Story**

One of the most striking features of a baby is their disproportionately large head. For newborns and very young infants, the head can be up to a quarter of their total body

length. As they grow, this ratio gradually decreases, but it remains significantly larger than an adult's throughout infancy. This large cranium accommodates their rapidly developing brain. When drawing, this means placing the eyes lower on the face than you might expect for an adult, and giving the forehead ample space.

### **Facial Features: Softness and Roundness**

A baby's face is characterized by its roundness and softness. Cheeks are plump, often forming a "baby fat" appearance. The chin is typically less defined, and the overall facial structure is less angular. The nose is usually small and often appears "button-like." Lips are full and soft, and the eyelids are prominent due to the roundness of the eyeball.

### **Body Proportions: Short Limbs and a Rounded Torso**

In contrast to their large head, babies have proportionally shorter limbs – arms and legs appear somewhat stubby. The torso is also rounded, with less defined waistlines or musculature compared to older children or adults. The abdomen is often rounded and prominent, a reflection of their internal organs and developing digestive system.

### **Hands and Feet: Chubby Delights**

Baby hands and feet are incredibly endearing. They are typically rounded and chubby, with short fingers and toes. The palms and soles are often fleshy. Capturing the gentle curl of a baby's hand or the slight dimples on their knuckles adds a touch of realism and charm to your drawing.

## **Step-by-Step Drawing Process: From Sketch to Lifelike Image**

Now that we understand the underlying anatomy, let's break down the drawing process into manageable steps. We'll begin with a basic construction and gradually add detail, focusing on techniques that enhance the softness and lifelike quality of your baby drawing. This is where the magic happens, transforming simple lines into a recognizable and lovable infant.

### **Step 1: The Basic Skeleton and Shapes (Gesture Drawing)**

Begin with light, gestural lines to establish the overall pose and proportions. Think of the baby as a collection of simple shapes: a large circle for the head, an oval for the torso, and cylinders or ovals for the limbs. Connect these shapes with flowing lines that suggest the body's natural curves. This initial stage is about capturing the essence of the pose and the volume of the form, not about precise detail. Pay attention to the tilt of the head, the bend of the limbs, and the overall balance.

## **Step 2: Refining the Head and Face**

With the basic structure in place, begin to refine the head. Lightly sketch in the guidelines for the eyes, nose, and mouth. Remember the lower placement of the eyes. For the eyes, draw them as large, rounded shapes, slightly almond-shaped. The nose should be a simple, small triangle or rounded form. The mouth is typically a soft, curved line. Don't be afraid to make these features quite large and round; this is characteristic of a baby's face. Erase any unnecessary construction lines as you go.

## **Step 3: Adding Features to the Body**

Now, focus on the body. Refine the curves of the torso, making it feel soft and rounded. Sketch in the rounded shapes of the arms and legs, ensuring they look short and plump. Pay attention to the joints – elbows and knees will appear as soft bulges rather than sharp angles. For the hands and feet, draw them as simple, rounded forms, considering how they might be positioned (e.g., loosely clenched fist, splayed fingers).

## **Step 4: Detailing the Facial Features**

This is where your baby drawing truly begins to come alive.

### **Eyes: Windows to Innocence**

The eyes are arguably the most crucial element in conveying emotion and lifelikeness. Draw the irises as large circles within the eye sockets. The pupils should be dark and slightly dilated, reflecting light. Add a highlight in each eye – a small white dot or shape – to give them a sense of depth and sparkle. The eyelids should be soft and rounded, with upper eyelids often obscuring a portion of the iris. Adding subtle eyelashes, typically few and soft, can enhance the tenderness.

### **Nose and Mouth: Subtle Expressions**

The nose, while small, should have subtle shading to suggest its form. The nostrils are often just small, dark marks. The mouth is where a lot of expression can be conveyed. A gentle smile, a neutral pout, or slightly parted lips can all add personality. Use soft, curved lines for the lips, and consider the subtle indentations at the corners of the mouth.

### **Ears: Placement and Shape**

Baby ears are typically rounded and can be somewhat small and tucked in against the head. Their placement is usually aligned with the eyes or slightly below. Don't over-detail them; a few simple lines to suggest the curve and lobe are usually sufficient.

## **Step 5: Shading and Softness**

Shading is key to creating the soft, rounded appearance of a baby. Use gentle, gradual shading techniques to define the forms. Focus on areas where light would fall and where shadows would create subtle curves.

### **Creating Soft Transitions**

Employ techniques like blending with a stump or your finger (if using graphite) or soft brush strokes (if using digital media) to achieve smooth transitions between light and shadow. Avoid harsh lines; instead, think in terms of subtle shifts in tone. Pay particular attention to the cheeks, forehead, and the curves of the limbs.

### **Highlighting the "Baby Fat"**

The areas of "baby fat" – cheeks, thighs, arms – should be rendered with soft highlights and very subtle shading. These areas are characterized by their plumpness and lack of sharp angles. The gentle curve of these forms is what you want to emphasize.

## **Step 6: Hair, Clothing, and Background**

Once the facial features and body are established, you can add details like hair. Baby hair is often fine and wispy. Instead of drawing individual strands, focus on masses of soft, slightly textured hair. If drawing clothing, keep it simple and soft, with gentle folds and drapes that complement the baby's form. A simple background, perhaps a soft gradient or a hint of a crib, can further enhance the drawing without distracting from the subject.

## **Essential Tips and Techniques for Drawing Babies**

Beyond the step-by-step process, several key tips and techniques can elevate your baby drawings from good to exceptional. These focus on capturing the unique essence of infancy and mastering the tools of the trade.

### **Reference is Your Best Friend**

Don't be afraid to use references! Look at photographs of babies, observe real infants (if possible), and study anatomical drawings. Paying close attention to how light falls on their features, the subtle expressions, and the way they hold their bodies will greatly improve your accuracy and understanding. Websites with royalty-free baby images are a fantastic resource for aspiring artists.

## **Embrace Soft Lines and Gradual Shading**

As mentioned, avoid hard, crisp lines. Babies are soft, and your drawing should reflect that. Use light pressure when sketching and build up your shading gradually. Blending is your friend. This creates a sense of volume and tenderness.

## **Focus on Expression and Emotion**

Even a simple change in the curve of the mouth or the angle of the eyes can dramatically alter the expression. Observe how babies convey emotions through subtle shifts in their features. Capturing that innocent gaze or a sleepy contentment is paramount.

## **Don't Forget the Details (Subtly)**

Small details, like the slight dimples on a baby's knees or the curve of their tiny fingernails, can add significant realism. However, these should be subtle and integrated seamlessly into the overall shading, not glaringly obvious.

## **Practice Different Poses and Ages**

Babies change rapidly. Practice drawing newborns, then slightly older infants, and even toddlers. Each age group has distinct characteristics. Experiment with different poses – sleeping, sitting, reaching – to develop your versatility.

## **Consider Your Medium**

The medium you choose will influence your approach.

### **Graphite Pencils: The Classic Choice**

Graphite pencils offer excellent control for detail and shading. A range of hardnesses will be useful, from light H pencils for sketching to softer B pencils for shading. A blending stump or tortillon is essential for smooth transitions.

### **Colored Pencils: Adding Warmth**

Colored pencils allow for subtle skin tones and can add a delicate warmth to your baby drawings. Layering and blending are key to achieving realistic skin tones.

### **Digital Art: Versatility and Control**

Digital drawing platforms offer immense flexibility with brushes, layers, and undo functions. You can achieve incredibly soft blending and precise detail with digital tools. Experimenting with soft airbrushes can be particularly effective for rendering baby skin.

## **Common Pitfalls to Avoid**

Even experienced artists can fall into common traps when drawing babies. Being aware of these can help you sidestep them and refine your technique.

### **Over-Angularizing Features**

The most common mistake is drawing babies with features that are too sharp or angular, making them look older than they are. Always remember the inherent softness and roundness of infant anatomy.

### **Incorrect Head-to-Body Ratio**

Forgetting the disproportionately large head is a frequent error. This can lead to a drawing that feels "off" without knowing why.

### **Ignoring the Power of Highlights**

Lack of proper highlights in the eyes can make them appear dull and lifeless. These small glints of light are essential for conveying life and sparkle.

### **Too Much Detail Too Soon**

Trying to add fine details before the basic forms are established can lead to a confused and messy drawing. Focus on getting the proportions and volumes right first.

### **Underestimating the Importance of Shading**

A flat, unshaded drawing of a baby will lack the roundness and depth that make them so appealing. Embrace shading as a tool to define form and create a sense of volume.

## **Conclusion: The Journey of Capturing Infancy**

Drawing a baby is a journey of observation, patience, and practice. By understanding the fundamental anatomical differences, following a structured approach, and employing the right techniques, you can create drawings that are not only accurate but also imbued with the tenderness and beauty of infancy. Each stroke of your pencil, each subtle blend of color, contributes to a portrait of innocence that will undoubtedly bring joy to both the artist and the viewer. So, pick up your tools, embrace the softness, and let your creativity flow as you bring these little ones to life on paper.

## Questions & Answers About how to draw a baby

| No | Question                                                       | Answer                                                                                                                                                                                                            |
|----|----------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1  | What are the basic shapes to start drawing a baby?             | Think in terms of simple geometric forms! A large circle for the head, a smaller oval or rounded rectangle for the body, and slightly curved lines or smaller ovals for limbs. Don't overcomplicate it initially. |
| 2  | How do I make a baby's face look cute and not like an adult's? | The key is to keep features rounded and proportionally larger. Eyes should be large and placed lower on the face. The nose and mouth are typically small and less defined than adult features.                    |
| 3  | What's the best way to capture the softness of baby skin?      | Use soft shading techniques! Blending with a smudge stick or your finger can create smooth transitions. Avoid harsh lines and dark, solid shadows. Gentle, diffused lighting is also key.                         |

|   |                                                                                  |                                                                                                                                                                                                                                            |
|---|----------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4 | How do I draw realistic baby hands and feet?                                     | Baby hands and feet are chubby and rounded with fewer defined knuckles. Think of them as little mittens or socks. Wrinkles are minimal and soft. Don't draw distinct fingers or toes right away; suggest them with curved lines.           |
| 5 | What are common proportions for a baby's head to body ratio?                     | Babies have proportionally larger heads compared to their bodies than adults. The head can be about 1/3 to 1/4 of the total body length, especially in newborns. As they grow, this ratio evens out.                                       |
| 6 | How can I draw a baby in motion, like crawling or sitting?                       | Focus on the underlying skeleton and curves. For sitting, curve the spine and tilt the pelvis. For crawling, emphasize the bend in the limbs and the push and pull of the body. Look at reference photos for accurate poses.               |
| 7 | What's the secret to drawing baby eyes that look alive?                          | Large pupils and irises with highlights are crucial. Add a subtle sheen to make them look wet and bright. Ensure the eyelids are rounded, and don't forget the gentle curve of the lower lash line.                                        |
| 8 | How do I differentiate between a newborn and a slightly older baby in a drawing? | Newborns have very soft, rounded features, often with a slightly larger head relative to their body. Older babies develop more distinct facial features, their limbs become a bit more defined, and they might show more expressive poses. |
| 9 | What drawing tools are best for capturing baby textures and softness?            | Soft graphite pencils (like 2B or softer) are great for shading. Colored pencils with good blending capabilities or pastels can also achieve a soft effect. Experiment with different blending tools like tortillons or cotton swabs.      |
