Understanding the AQA A Level Geography Structure

The AQA A Level Geography specification is structured into two main components: a compulsory taught course and an independent investigation. This dual approach ensures a broad theoretical understanding coupled with practical, in-depth research skills. The compulsory content is divided into several thematic units, offering a comprehensive overview of geographical phenomena. The independent investigation, a cornerstone of the qualification, allows students to explore a topic of their choice, fostering critical thinking and analytical abilities.

Compulsory Content Breakdown:

Unveiling the Thematic Units

The AQA A Level Geography syllabus delves into a diverse range of topics, fostering a holistic understanding of the world. These units are designed to be interconnected, demonstrating how physical and human processes interact to shape landscapes and societies.

Unit 1: Tectonics

This unit forms the bedrock of the physical geography component. Students will explore the fundamental processes driving plate tectonics, including plate boundaries, mantle convection, and the formation of landforms such as volcanoes, earthquakes, and fold mountains. A critical aspect is understanding the causes of earthquakes and volcanic eruptions, their distribution, and the varying impacts on human populations and the environment. Examining real-world case studies of tectonic events, like the Kanto earthquake or the Eyjafjallajökull eruption, is crucial for solidifying conceptual understanding. Discussions on hazard management and mitigation strategies are also integral to this section, highlighting the human response to these natural phenomena. This unit often necessitates an understanding of earth science and

geological processes.

Unit 2: Coastal Systems and Landscapes

Focusing on the dynamic interface between land and sea, this unit examines coastal processes and the evolution of coastal landforms. Students will investigate the role of wave erosion, transportation, and deposition in shaping shorelines. Topics include the formation of features like cliffs, wave-cut platforms, bays, spits, and saltmarshes. The human impact on coastal environments, including coastal management techniques such as groynes, sea walls, and beach nourishment, are also key areas of study. Analysing the challenges of coastal erosion and flooding, particularly in light of rising sea levels due to climate change, provides a contemporary and relevant focus. Understanding geomorphology is central here.

Unit 3: Glacial Systems and Landscapes

This unit shifts focus to the powerful influence of ice on shaping the Earth's surface. Students will study the processes of glaciation, including the formation of ice sheets and glaciers, and their erosional and depositional landforms. Key features explored include U-shaped valleys, corries, arêtes, pyramidal peaks, moraines, and drumlins. The impact of glacial retreat

and the subsequent development of periglacial environments are also examined. This section often involves the study of climate change impacts on glacial systems and the consequences for global sea levels and ecosystems. Concepts of cryosphere and quaternary environments are relevant.

Unit 4: Water and Carbon Cycles

This unit explores the crucial biogeochemical cycles that underpin Earth's systems. Students will investigate the global water cycle, including evaporation, transpiration, precipitation, and runoff, and the factors that influence these processes. The impact of human activities, such as deforestation and urbanisation, on the water cycle is a significant area of study. Similarly, the unit examines the carbon cycle, including the roles of photosynthesis, respiration, and combustion, and the natural and human factors that affect its balance. Understanding the link between these cycles and climate change is paramount, highlighting issues like the enhanced greenhouse effect and its consequences. Global carbon budget and hydrological cycle are key terms.

Unit 5: Hazards

Building on the understanding of tectonic and glacial

processes, this unit provides a broader perspective on natural hazards. Students will explore the classification of hazards (e.g., geophysical, meteorological, hydrological, climatological), their causes, and their impacts. The focus extends to the vulnerability of populations, the concept of risk, and the strategies for disaster preparedness and management. Case studies of significant hazard events, analysing their societal, economic, and environmental consequences, are essential. Understanding disaster risk reduction (DRR) and the role of international aid is also important. The relationship between human activity and hazard intensification is a recurring theme.

Unit 6: Changing Spaces: Making Connections

This unit delves into the human geography of place and space. Students will explore the concept of place, how it is constructed and perceived, and the forces that shape it. The unit examines the dynamics of globalisation, including its impacts on economies, cultures, and societies. Topics like urbanisation, migration, and the changing nature of work are explored, with a focus on how these processes create distinct spatial patterns and inequalities. Understanding the concept of 'global shift' and its

geographical implications is crucial. Concepts of sense of place and placemaking are important here.

Unit 7: Rethinking Spaces: Global Connections

Continuing the human geography theme, this unit focuses on the interconnectedness of the world. Students will analyse global systems and flows, including trade, finance, and information. The unit examines the challenges of global inequality, development, and the role of international organisations. Issues of resource management and sustainability are explored in a global context, considering the unequal distribution of resources and the environmental consequences of global consumption patterns. The rise of multinational corporations and their impact on local and global economies are also discussed. Understanding global supply chains and international development goals is essential.

Unit 8: Inequality: Where are we and why?

This unit critically examines the nature and causes of inequality across different scales, from local to global. Students will explore various forms of inequality, including economic, social, and spatial disparities. The unit investigates the factors contributing to these

inequalities, such as historical legacies, political decisions, and economic structures. Analyzing case studies of regions or communities experiencing significant inequality, and exploring potential solutions, is a key component. Understanding different measures of development and poverty is crucial.

Unit 9: Globalisation: Why is the world more connected?

This unit provides a deeper dive into the multifaceted phenomenon of globalisation. Students will explore the drivers of globalisation, including technological advancements, liberalisation of trade, and increased mobility. The unit examines the economic, social, cultural, and political impacts of globalisation, both positive and negative. The role of international organisations, supranational bodies, and non-governmental organisations in shaping global connections is analysed. Understanding the concept of globalisation and its implications is also important. The geographical spread of ideas and innovations is a key focus.

The Independent Investigation:

Cultivating Research Prowess

Beyond the structured units, the AQA A Level Geography specification places significant emphasis on independent research. The independent investigation, typically undertaken in Year 13, allows students to explore a geographical question or issue of their own choosing. This hands-on experience is invaluable, fostering skills in:

1. Question formulation and hypothesis development
2. Data collection (both primary and secondary)
3. Data analysis and interpretation
4. Critical evaluation of findings
5. Presentation of research in a clear and coherent report

This component is assessed internally but moderated externally, making it a crucial element of the overall A Level grade. Students are encouraged to choose topics that genuinely interest them, allowing for deeper engagement and a more meaningful learning experience. This practical application of geographical knowledge is a key differentiator of the AQA specification and prepares students for higher education and a wide range of careers.

Assessment Structure: How Students Will Be Evaluated

The AQA A Level Geography qualification is assessed through a combination of written examinations and the independent investigation. The written exams typically cover the compulsory units, testing students' knowledge, understanding, and analytical skills. The structure of these exams is designed to assess a range of cognitive abilities, from recall of facts to higher-order thinking skills like evaluation and synthesis. The independent investigation, as mentioned, assesses the student's ability to conduct independent geographical research.

Understanding the assessment objectives and mark schemes is vital for students to tailor their revision and exam technique effectively. Familiarising oneself with the types of questions asked and the depth of answer expected can make a significant difference to performance.
